MODEL OVERVIEW ..... 62 - 63

“ Compass were a dream to deal with. ”

They visited and prepared a very detailed quote with full details/breakdown. A start date was agreed on, they turned up on the agreed day and finished the install ahead of schedule. The install team were a pleasure to work with and had a good eye for detail / getting things right / keeping the site tidy. I would not hesitate to recommend Compass.

Tim Wilkinson

“ Would highly recommend Compass Pools. ”

Compass provided an excellent sales service with James Poore giving a full explanation of the pool construction and installation process. Compass delivered each stage on time and installed the pool quickly and efficiently under the direction of Alex. All team members were knowledgeable and professional. Would highly recommend Compass Pools to anyone thinking of getting a pool.

Sophie Bardrick

“ A premium product but worth it. ”

There are two aspects to the company, the people and the product. I can't fault either of them. The people are friendly, expert and very helpful.

It's a premium product but worth it. The build quality is first rate and the operating system options can give you a package as sophisticated as you wish.

David Clifford

“ The installation team were exceptional. ”

The process of obtaining a quotation from Nick Robertson and the initial survey completion by Alex Kemsley was seamless and at no time do you feel you were being pushed to buy!!

The installation team were exceptional and very knowledgeable. Elliot & John were a pleasure to have here whilst they battled with the November inclement Weather. I would highly recommend Compass Pools and we are overjoyed with our pool.

Stuart Minchin

“ I would thoroughly recommend Compass Pools. ”

Compass Pools were great throughout the whole process of choosing a pool, ordering it, installing it and tweaking any slight changes since it was finished. It has now been in for a year and I swim every day before breakfast regardless of the weather, snow on the ground etc.

We have recently had a pool house finished so I can go straight from the pool into the shower without having to dry first!

Peter Williams

our story

1981

1981 / Australia
Compass pools formed.

2005

17.7. 2005 / Slovakia
Compass Europe factory was established.

2007

Development of cyber colours and new pool shape with Roman steps and flat bottom.

2008

Compass rollo cover was designed and added to the accessories portfolio.

2013

Compass carbon revolution, by adding this material to our pools we gave them stability and durability.

2014

Excellence in design for the first time in pools category. After introducing the Yacht pool to the market, it immediately won the Red Dot and iF Design Awards.

2016

The new Compass Europe Factory opening ceremony.
In 1 year we furnished and opened new production facility. We became the most modern and ECO friendly pool producer in EU.

2016 **Compass Europe opened a brand new factory.**

2017 **We brought innovations into our pool portfolio.**

2018

technology & innovations

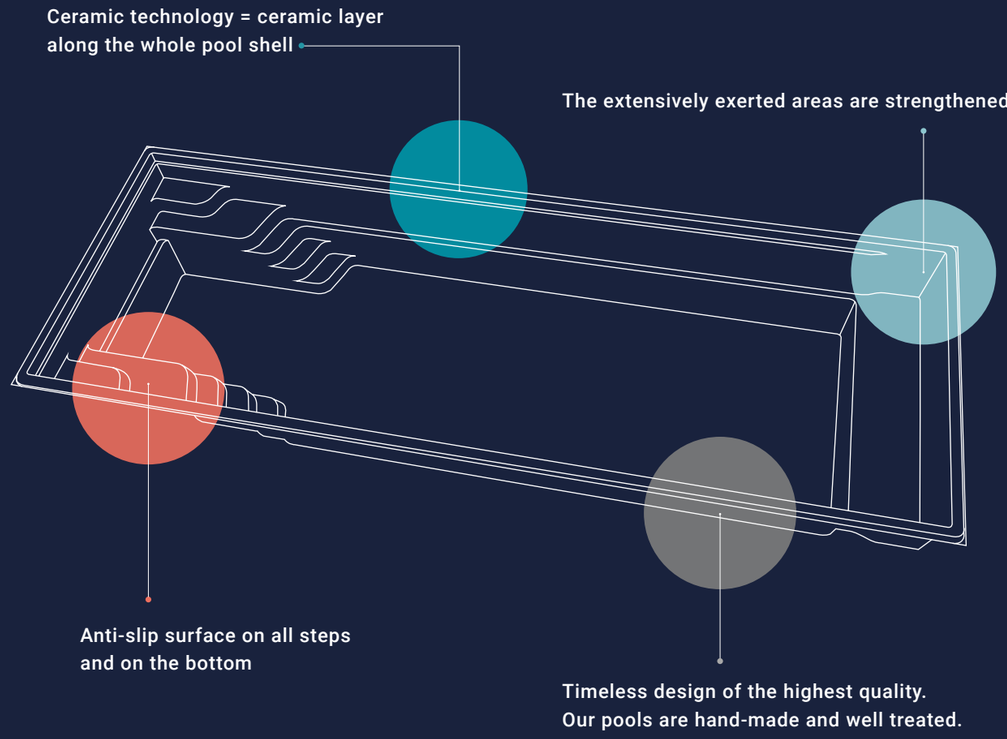

A super-tough pool you know you can rely on

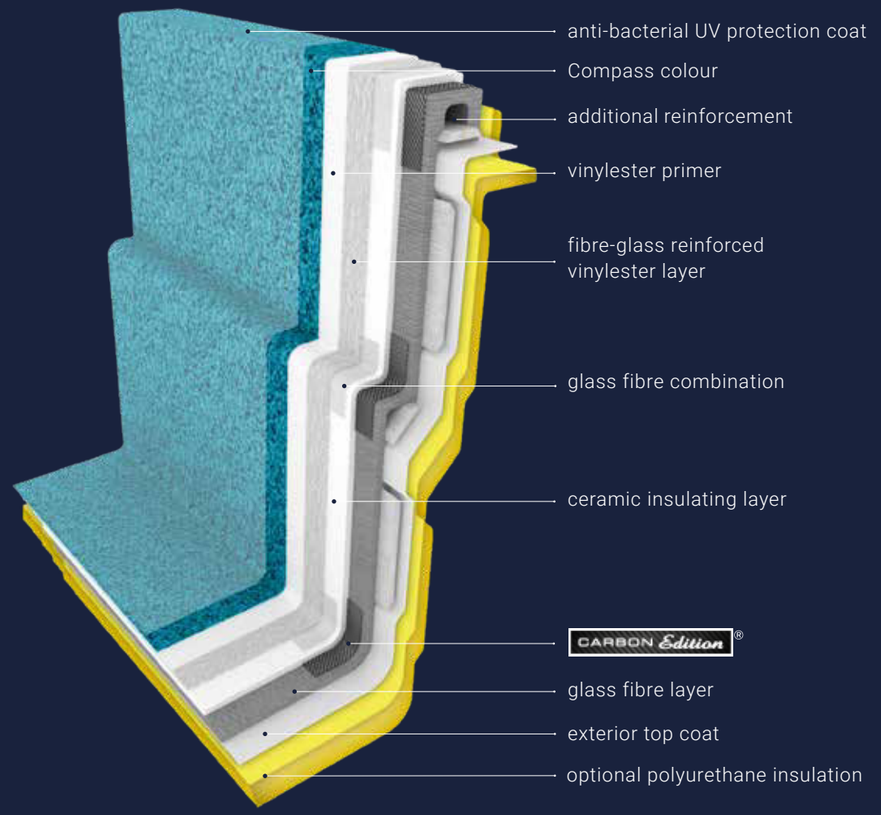

When Compass Pools introduced ceramic technology to the swimming pool industry in the mid 90's, it quickly became an accepted technology around the world. For decades now, we've been recognised as **world leaders and innovators in this market.**

Our patented technology dramatically improves the pool's structural integrity and is the reason why Compass Pools can offer all customers the confidence in a solution that will suit their specific needs.

The secret to the success and durability of a Compass Pool is in its patented ceramic composite design. The extensively exerted areas of the pool are structurally strengthened by the additional use of carbon in the patented Ceramic System.

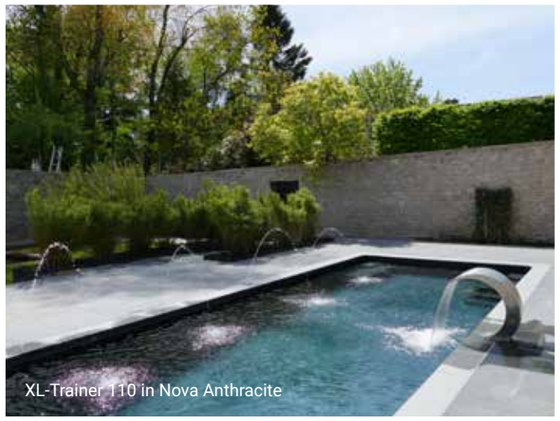

Carbon has the highest compressive strength of all reinforcement materials. The same material with high strength, also found in automobiles, ships and aeroplanes, has been used in Compass ceramic pools since 2013.

Why choose a compass carbon ceramic pool?

XL-Trainer 110 in Nova Anthracite

Concrete Pool

- Unlimited design capabilities
- Durability when built to standard
- Almost unlimited choice of finishes
- 6–12 week installation
- Rough porous surface increases chemical use
- Cracks in freeze/thaw climates
- Excessive chemical usage
- High initial build cost
- Requires major refurb every 10–15 years
- High lifetime cost of ownership
- High initial build cost

Vinyl Liner Pool

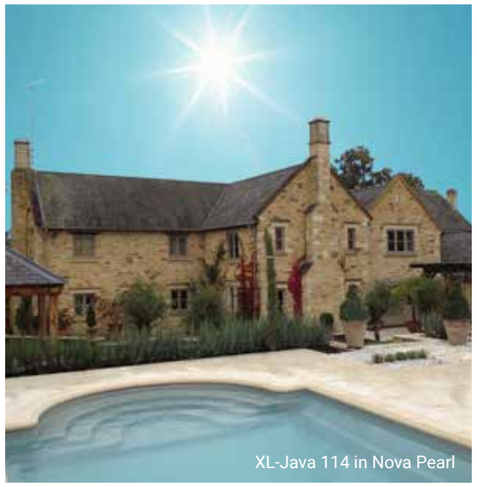

- Low initial build cost
- Easily punctured/torn by pets & sharp objects
- Liners require replacing every (5–10 years)
- Walls discolour & deteriorate over time
- Susceptible to chemical imbalance damage
- Poor energy efficiency
- High lifetime cost of ownership

Did you know?

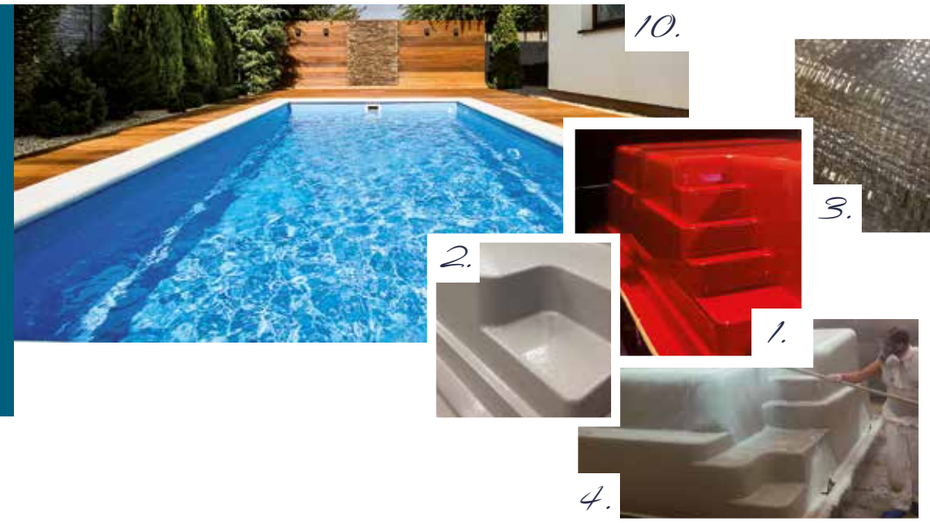

The average family concrete pool has 15 miles of grout lines.

Compass Ceramic Pool

- Reduced usage of chemicals due to anti-bacterial surface
- Rapid Installation in 3–6 weeks
- Flexible ceramic core
- Exclusive carbon fibre layer
- Lasting investment
- Wide range of pool sizes, shapes & styles
- Easy maintenance
- Low lifetime cost of ownership
- Limited custom sizes & shapes

XL-Java 114 in Nova Pearl

10 STEPS
MANUFACTURE TO INSTALLATION OF A COMPASS CERAMIC POOL

10 Steps

Compass Ceramic Pools is the world's leading manufacturer of one-piece composite pools and is committed to building the highest quality, best value pool on the market with the most advanced manufacturing techniques, the finest materials, and the most stringent quality controls.

Manufacture

1. The mould is scrupulously prepared so that the pool is easily separated from it, giving the pool a superior quality of finish.
2. The Antibacterial, UV Stable gel coat is added first, followed by a vinylester base colour for the highest impact resistance and osmosis blistering protection.
3. An additional layer of glass-fibre matting, reinforced by chopped and hand laid glass-fibre are rolled for durability and strength.
4. The heart of a Compass Ceramic Pool is our unique ceramic layer, adding great strength to the pool walls and providing enhanced water-proofing and insulation.
5. A carbon-fibre layer is strategically integrated to structurally reinforce specific areas of the pool to give enhanced durability and flexibility. On top of this comes a polyester layer.
6. Our closed beam sections are then added to give rigidity around the pool under the coping and eliminate the need for steel.
7. The exterior finish coat is added and the completed pool is then lifted off the mould.
8. A finished pool is then loaded onto an articulated low-loader ready for delivery to its new home.

Installation

9. After the excavation is carefully dug to the correct shape and depth, the bottom is prepared to attain the correct floor level. The pool is then ready to be lowered into place.
10. The final steps in the process are filling with water and backfilling around the pool. After this process is completed, the plumbing, filtration and electrical equipment are installed.

There's nothing quite like a freshwater pool

FreshWater
SWIMMING POOLS

There is nothing like swimming in a FreshWater™ swimming pool. No stinging eyes and horrible smell on your skin with nothing but safe clean water. Compass Pools along with Philips Electronics have revolutionized the modern swimming pool to give you a swimming experience that feels like you are swimming in fresh tap water.*

*Requires pools to be regularly maintained to the manufactures instructions, you should not drink your pool water.

Outdoor Plant Room

Sound resistant and lockable enclosure

Self contained filtration unit

Every Compass pool is available as standard with the All-in-One self contained filtration unit, integrated either with the FreshWater™ system or with a standard sand filter and pump. This is a sound resistant, lockable enclosure that is pre-plumbed, wired and fully tested off site.

It has been designed to be as compact as physically possible, approximately the size of a wardrobe and easily concealed within your garden or outbuilding. This reduces construction time to a minimum and eliminates niggling problems and delays that can occur from assembling filtration systems on site.

Pre-plumbed, wired and fully tested off site

Indoor Plant Room

Coping stones available in striking finishes

As well as looking attractive, the paved area around the pool must also ensure safety.

Compass Pool coping stones are selected for their high quality and durability, with some featuring a textured surface providing excellent anti-slip properties.

The front edge and corners of each coping are polished and rounded off so there are no sharp edges. Available in striking finishes with matching surround.

Granite

Sandstone

Safety first

ALL COMPASS POOLS COPINGS AND MATCHING SURROUND STONES ARE SLIP TESTED TO BRITISH STANDARDS BS 7976 A LEGAL REQUIREMENT TO ENSURING THEY ARE SAFE BOTH WET AND DRY.

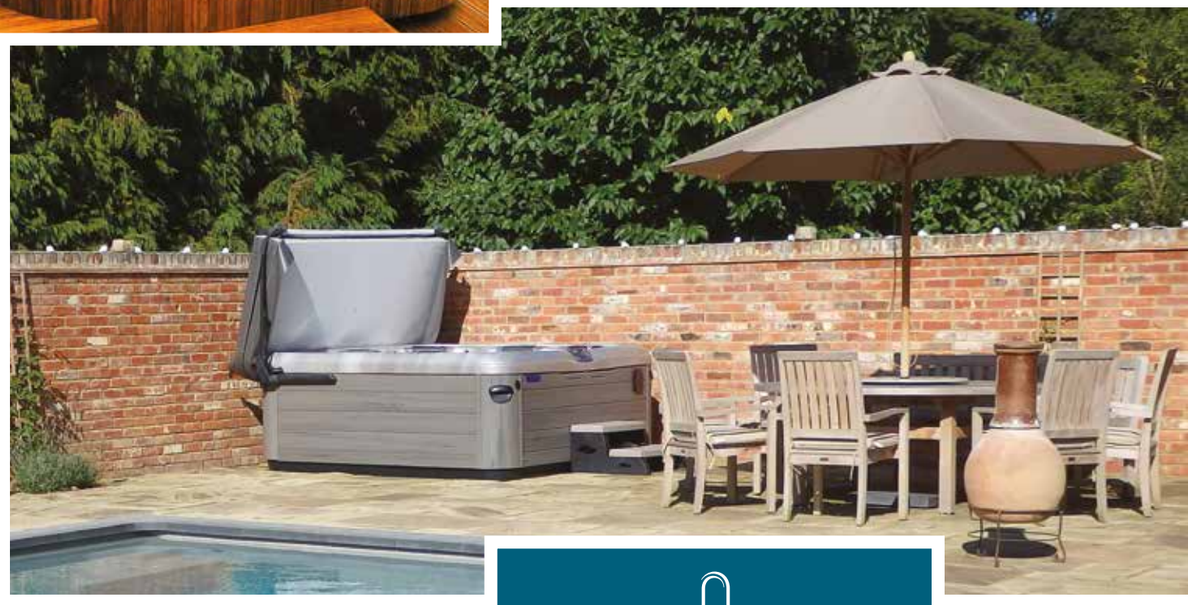

XL-Trainer 110 with Granite

Complete your wellness with Villeroy & Boch

For those customers looking to complete their wellness project, Compass Pools have partnered with the luxury German manufacturer Villeroy & Boch.

Giving you a full range of hot tubs and spas to give you the ultimate relaxation and entertainment experience.

Pool heating

In the UK some form of heating system is almost always required to reliably raise and control pool temperature.

A **heating system** should operate up to and until the water reaches that **desired temperature.** Specifying a heating system is created in close consultation with the client, and takes into account a number of factors:

Air/water heat pump
Heat pumps are gaining in popularity for heating pools, especially as the costs of fossil fuels continue to rise. A heat pump works by absorbing heat from the surrounding air and transferring it to the pool water. The ambient air doesn't itself have to be warm though, clearly, the warmer the air, the more heat is available to extract, and the more efficiently the heat pump will operate.

High performance fuel oil heater
The same working principle as with an oil heater, but using natural gas, LPG or butane as the fuel. NB: Propane (LPG) and butane solutions offer the same advantages as natural gas, but the running costs are often considerably higher.

Electric Heating
Directly heats pool water via an array of stainless steel or titanium electric heating elements. With escalating electricity prices it is seen as the least viable of the direct heating systems and tends only to be installed in situations where there really is no other alternative.

Gas/Oil

Electric

Air/Heat

Heat Exchange

Solar

Heating Source Cost Comparison.
Advantages / Disadvantages

SOURCE	SPEED	RUNNING COST	TEMP. ACCURACY	WEATHER	INSTALL COST
Heat Pump	Medium	Low	High	Ambient Above 8°	Medium
Solar	Slow	None	Low	Ambient & Sunlight	High
Gas/Oil	Fast	High	High	None	Med
Electric	Fast	V. High	High	None	Low

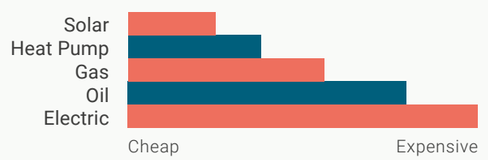

There are a number of options to heat your pool in the UK

Renewables - biomass, pellet, and log burners
Many consumers are looking to reduce their carbon footprint and their heating bills in the face of ever increasing fossil fuel costs, and solid-fuel renewable heating systems are gaining in popularity in that respect. The real value to consumers is to those looking to run a carbon-neutral system, as long as the fuel comes from a sustainable and replenished source, of course.

Solar - Evacuated tube
Evacuated tube solar systems are relatively efficient collectors of heat, converting the sun's energy. Whilst they will collect much greater quantities of heat on sunny days, the point to note is that as long as sunlight reaches them, they still work to a degree, and are not reliant on ambient temperature either. However, as the sun is unreliable in the UK, it should only be considered as a secondary (i.e. back-up) system.

Hybrid
Using a combination of renewable and conventional heating systems the ultimate flexibility can be achieved to maintain all year round heat, cutting heating costs to a minimum.

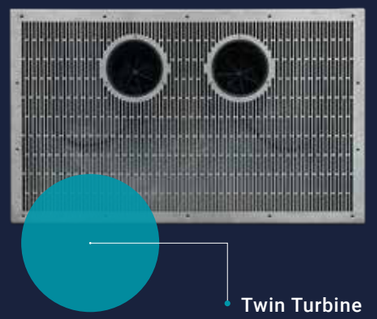

Heating Running Costs (£)
Over 6 Month Swimming Season

Serious about exercise or training?

For those who are looking to make use of the pool for some serious exercise or training then either a turbine or counter current make the ideal addition to your Compass Pool.

Imagine these systems as a treadmill for your pool. You can adjust the speed and resistance of both systems for an infinite swim at your pace.

Twin Turbine

Counter Current

XL-Trainer 110 in Nova Navy

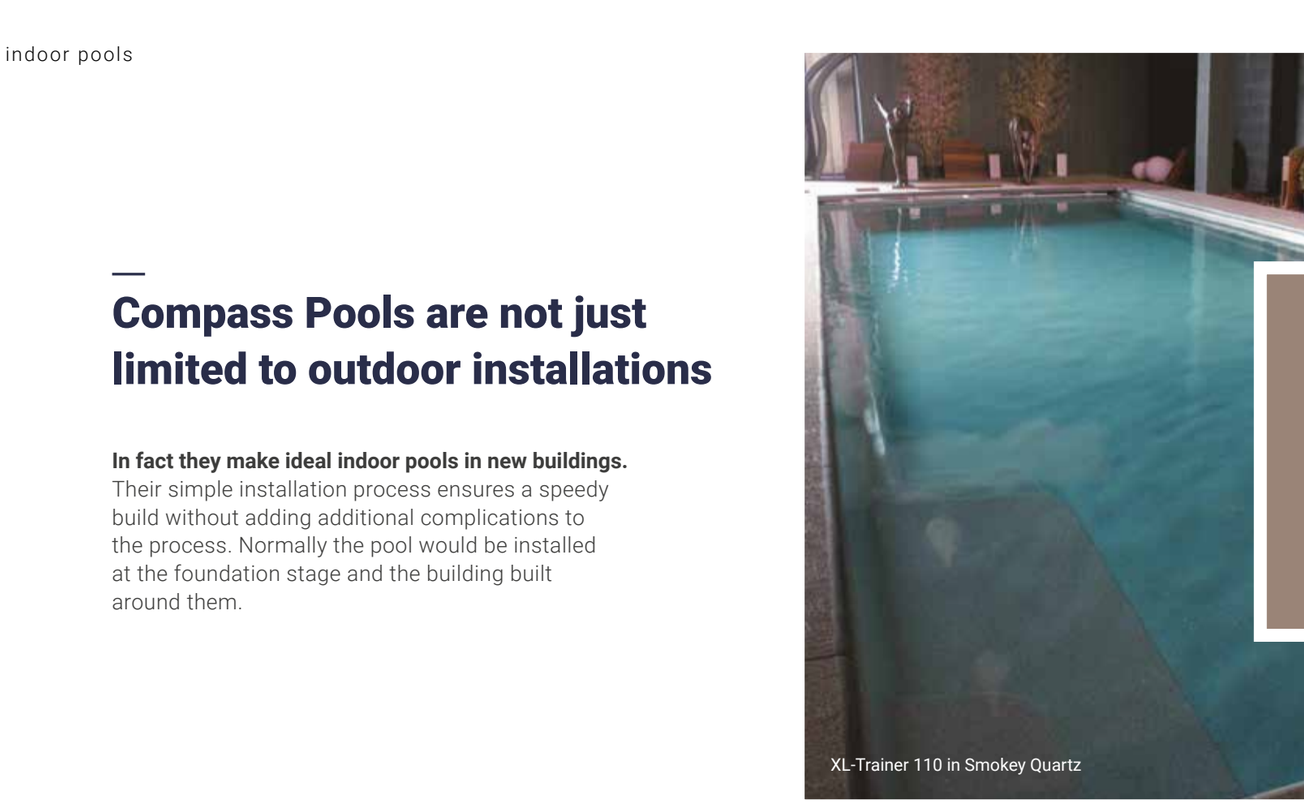

Extend your swimming season

Most outdoor pools in the UK are open from March - October. Outside this time pools are either hibernated or the heating cranked up to allow swimming in colder weather. If you are in a windy spot, or just fancy a swim when it's raining a sliding cover is the ideal solution. Slid back when its warm and sunny and covered over when the weather is not quite so clement will give you the best of both world.

Compass Pools are not just limited to outdoor installations

In fact they make ideal indoor pools in new buildings. Their simple installation process ensures a speedy build without adding additional complications to the process. Normally the pool would be installed at the foundation stage and the building built around them.

XL-Trainer 110 FB in Nova Anthracite

XL-Trainer 110 in Smokey Quartz

MOLTON BROWN LONDON

Turn your indoor pool into a tranquil spa experience

With our optionally integrated aromatherapy system, you can gently add Molten Brown aroma into your pool room whilst you are swimming.

Air handling

Part of an indoor pool installation is ensuring the air within the room isn't stale and humid. Compass with the leading air handling manufacturer in the UK have developed the EcoFresh touch-screen air handling unit.

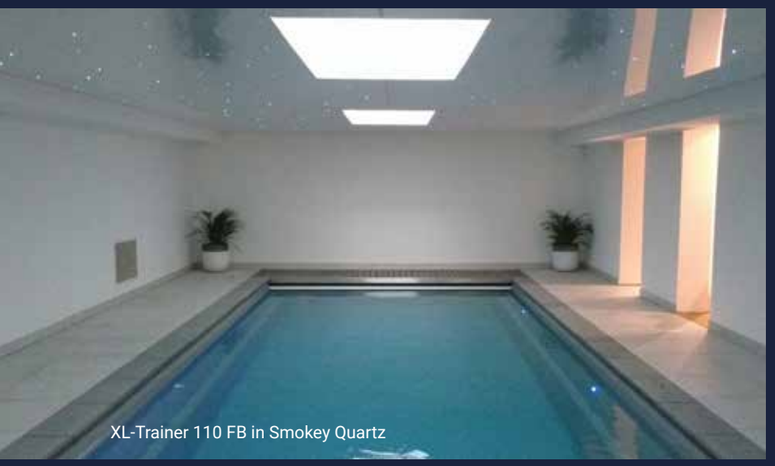

A system that captures outgoing heat and exchanges stale air for fresh dry air. Reducing the humidity and making a pleasant environment to swim in. This intelligent system is ultra quiet using variable speed fans monitoring the humidity in the air.

When linked to our automatic covers the temperature in the room varies to save energy when you are not using the pool.

compass pools insulation that has the edge

When it comes to insulation, a Compass Pool has the edge. As standard every pool is insulated with Ceramic Micro-spheres. Ceramic is used in the space program to keep the heat out, on a pool, to keep the heat in.

Optionally the shell can be backed with additional polyurethane insulation to further enhance the U value (amount of heat that can escape) right down to 0.18W/m2.K exceeding the required minimums substantially for indoor pools.

XL-Trainer 110 FB in Smokey Quartz

Polyurethane Insulation

0.18W/m2.K

U Value

How is it installed?
Insulation is not integrated into the pool's structure and so water tightness of the pool will not be affected. Should there be any ground movement, the structure and tiles will remain totally intact, unlike conventional pool insulation.

What does this actually mean for me?
In short, lower running costs and a lower carbon footprint. Energy lost through the pool shell can be reduced by up to 80% (depending on soil type and pool location). The good news is this technology is not just restricted to indoor pools, and our outdoor pool clients can also benefit from its properties too, when specified as an option.

Application method
Factory sprayed high density polyurethane insulation straight onto the shell gives superior insulation properties with no thermal bridging or thermal mass to heat.

Optionally, pipework can be insulated upon request

As standard every pool is insulated with Ceramic Micro-spheres.

Your beautiful pool has never looked better

Life is not black and white. Compass invented colours to recapture your great holiday memories. Design your own sea in your garden.

NOVA® COLOURS

New types of colour chips and modernized primary colour mixtures are used! Aesthetically, its translucent holographic effect gives a distinguishing brilliance.

BI-LUMINITE® & CYBER COLOURS

These colours change the look of composite pools thanks to small glittering particles just below the top-coat that reacts with sunlight and the application of two paint layers instead of one.

Features:

- **2 layers that are applied separately**
- **colour effect mimicking the most beautiful sea lagoon you may have visited**
- **coloured layers are applied manually, similar to high quality cars, that's why every pool is an original**

self-cleaning pool
VANTAGE

Just imagine a pool which cleans itself, saves money and uses less chemicals.

VANTAGE system is number one in the world among circulation and cleaning systems and it is much more efficient than any pool vacuum cleaner. It provides efficient and high-performance cleaning from the surface to the bottom of the pool.

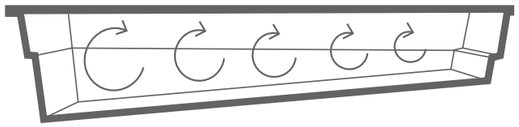

Its patented telescopic nozzles "Pop-up" and are able to cover an area four times larger than a small device and therefore it copes even with larger pieces of debris. The system is completely automated and silent. It works even when you are enjoying your pool.

No time to look after your pool? We bring simple and effective solution.

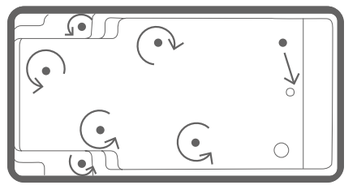

Benefits of Vantage system:

- you get the best self-cleaning pool
- water circulation eliminates growth of algae and bacteria
- reduces the usage of chemicals

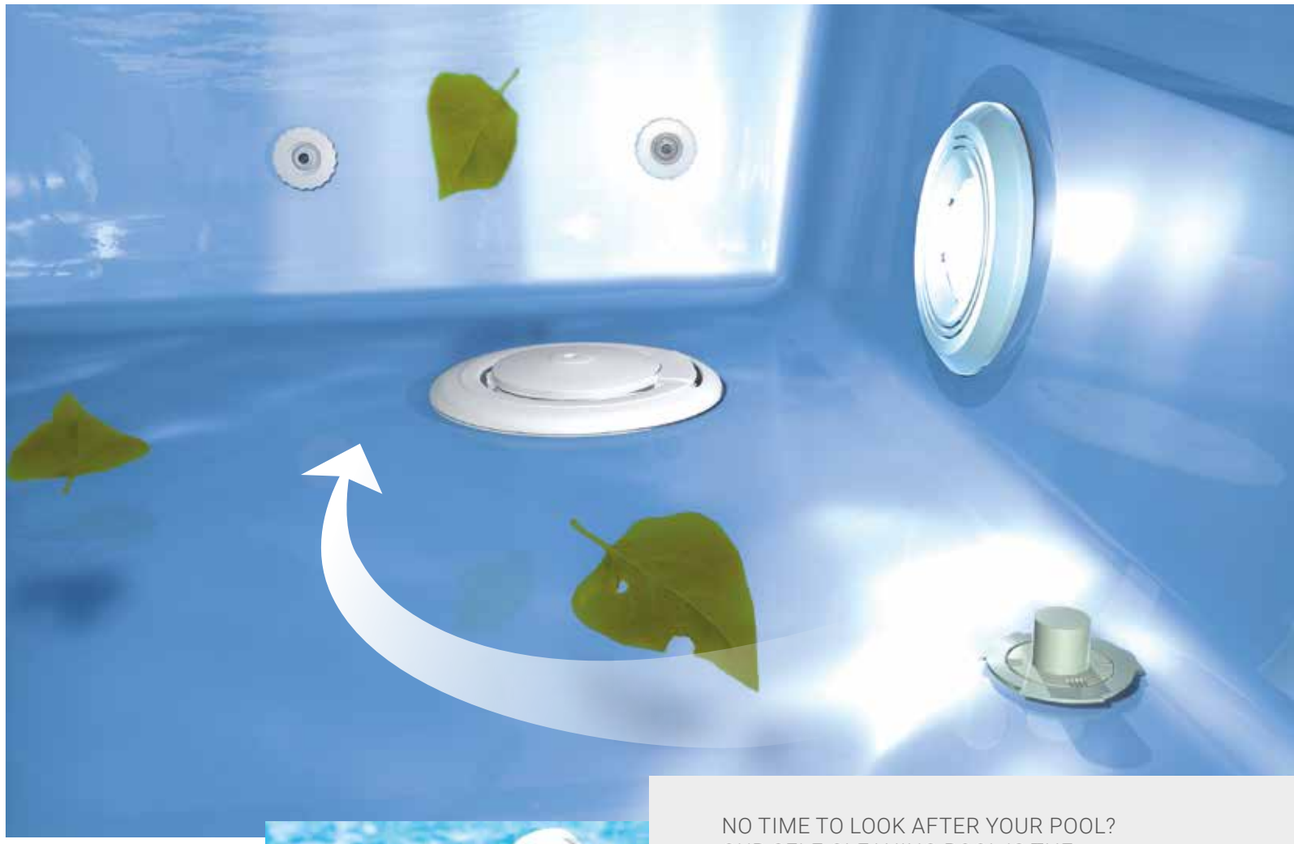

No need for regular hand vacuuming or any other cleaning equipment.

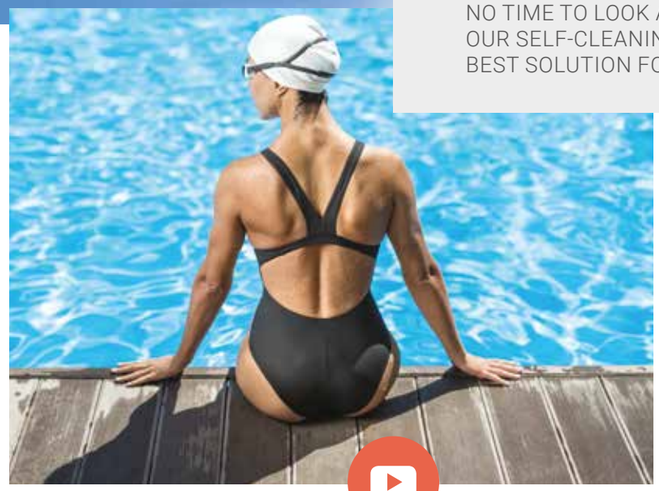

Water circulation

“Pop- up” nozzles work

NO TIME TO LOOK AFTER YOUR POOL?
OUR SELF-CLEANING POOL IS THE
BEST SOLUTION FOR YOU.
